

Job Notification Form, IIT Delhi

Company Overview

Name: Esper (Shoonya Software Services Pvt Ltd)

Website: <http://www.esper.io/???>

Company Type: Information Technology

Description: Esper is reimagining the future of app and device management for dedicated devices. Rather than follow the standard approach to device management delivering a watered down implementation, Esper focuses on the needs of developers helping them move their app and device management from a portal-based approach into code. We deliver scalable APIs with SDKs, tools, and a specially designed Console streamlining the entire application lifecycle. Across development, test, deployment, management, and support Esper gives developers and admins a new approach for dedicated devices. We specialize in Android, the most popular mobile OS on the planet with over 2 billion active users which is increasingly the OS of choice for dedicated devices.

At Esper, we offer an intuitive, cloud-based platform for managing all Android devices seamlessly and securely via our APIs or through our Console. Whether that happens to be a restaurant kiosk, POS, or other innovative Android dedicated device solution, we give you, your employees, and customers peace of mind, knowing that their assets are safe and secure with Esper.

Our full-stack platform includes capabilities spanning device management, remote management, and application deployment. Additionally, we support Over the Air (OTA) updates enabling all devices to be kept up-to-date with the latest security updates.

So, imagine coupling together the world's most popular mobile OS with the best-in-class features of enterprise device fleet management available via APIs. That's Esper!

Job Details

Designation: Software Development Engineer - Business Functions - UI

Type: Information Technology

Place of Posting: bangalore

Job Details: Software Development Engineer - Business Functions - UI

Esper is experiencing hyper growth! We're the industry's first DevOps SaaS platform designed to provide a simple, safe, and secure way for engineering and DevOps teams to release applications and manage smart Android devices. Our device infrastructure enables developer, mid-market orgs, and enterprise fleets of 100,000+ devices to deliver their software as a service. Esper has rapidly-growing global customer adoption among some of the world's most innovative major brands in retail, hospitality, logistics, and healthcare.

In this role you will working on customer facing business functions and features built on top of our core platforms. This roles expects you to have extreme

ownership and a knack for understanding customer requirements and related engineering deliverables.

As a member of the Frontend team you will influence how we build individual features. You will take ownership of end to end product quality that will help make our customer facing components reliable and performant. You will work closely with the Cloud, Android, Design and Marketing team to drive the development from the concept stage to the launch stage. If you're excited to have a large impact on Esper and the device industry, you'll find this role to be engaging, challenging, and full of opportunities to learn and grow.

Why this role is unique

You'll be responsible for end to end implementation and maintenance of the features, fixes and enhancements to the platform.

Your contributions directly and immediately improve the experience of our customers

You get to work on cutting edge technologies

Each project you take up will increase the scope of your impact on the platform

What you'll do

Take ownership of frontend technologies in our stack, with a mindset that prioritizes security, resilience, and iteration speed.

Write high quality, stable, accessible software

Work in an agile, high speed, collaborative startup environment to solve complex problems

Constantly communicate with stakeholders to keep them apprised of the progress and/or blockers

Become the Subject Matter Expert(SME) for the UI Team

Actively reduce and keep a low bug count

What we're looking for

Experience in using any SCM in day to day development e.g git, mercurial etc.

Familiarity with object oriented programming and design patterns.

Ability to think from the Usability & Accessibility perspective and Ability to build a beautiful, Usable product that is lightweight and performant.

Experience in CSS, HTML, JavaScript, ES6 including DOM manipulation and the JavaScript object model.

Familiarity with newer specifications of EcmaScript, and up-to-date with the latest technologies.

Hands on experience with any modern UI frameworks like React.js, Angularjs etc

Expert knowledge of RESTful API design and implementation

Preferred Qualifications

Bachelor's or Master's degree in Computer Science/Engineering

Experience in React.js, Nodejs and Reduxjs

Familiarity with CI/CD workflows.

Knowledge of deployment processes being used in the team and/or organization

Familiarity or experience in TDD or similar software development methodologies

Experience working in a startup or startup like environment
