Job Notification Form, IIT Delhi

Company Overview

Name:	Esper (Shoonya Software Services Pvt Ltd)
Website:	http://www.esper.io/???
Company Type:	Information Technology

Description: Esper is reimagining the future of app and device management for dedicated devices. Rather than follow the standard approach to device management delivering a watered down implementation, Esper focuses on the needs of developers helping them move their app and device management from a portal-based approach into code. We deliver scalable APIs with SDKs, tools, and a specially designed Console streamlining the entire application lifecycle. Across development, test, deployment, management, and support Esper gives developers and admins a new approach for dedicated devices. We specialize in Android, the most popular mobile OS on the planet with over 2 billion active users which is increasingly the OS of choice for dedicated devices.

At Esper, we offer an intuitive, cloud-based platform for managing all Android devices seamlessly and securely via our APIs or through our Console. Whether that happens to be a restaurant kiosk, POS, or other innovative Android dedicated device solution, we give you, your employees, and customers peace of mind, knowing that their assets are safe and secure with Esper.

Our full-stack platform includes capabilities spanning device management, remote management, and application deployment. Additionally, we support Over the Air (OTA) updates enabling all devices to be kept up-to-date with the latest security updates.

So, imagine coupling together the world's most popular mobile OS with the best-in-class features of enterprise device fleet management available via APIs. That's Esper!

Job Details

Designation:	Software Development Engineer - Entry Level - Cloud
Type:	Information Technology
Place of Posting:	bangalore

Job Details: Software Development Engineer - Entry Level - Cloud

Esper is experiencing hyper growth! We're the industry's first DevOps SaaS platform designed to provide a simple, safe, and secure way for engineering and DevOps teams to release applications and manage smart Android devices. Our device infrastructure enables developer, mid-market orgs, and enterprise fleets of 100,000+ devices to deliver their software as a service. Esper has rapidly-growing global customer adoption among some of the world's most innovative major brands in retail, hospitality, logistics, and healthcare.

In this role you will contribute to a critical and highly-visible function within the Esper business.

You will be given the opportunity to autonomously deliver product features, write automation and improve security, scalability and stability of the platform. You will work with extraordinary talent to solve complex problems for both internal teams and external customers. If you're excited to have a large impact on Esper and the device industry, you'll find this role to be engaging, challenging, and full of opportunities to learn and grow.

Why this role is unique

You'll be responsible for end to end implementation and maintenance of the features, fixes and enhancements to the platform.
Your contributions directly and immediately improve the experience of our customers
You get to work on cutting edge technologies
You'll solve scalability problems that come with managing millions of devices
Each project you take up will increase the scope of your impact on the platform
What you'll do
Write high quality, stable and test driven software
Actively reduce and keep a low bug count
Write clear and structured documentation, release notes and RCAs
Take ownership of the features, fixes and improvements to the the Esper Platform
Constantly communicate with stakeholders to keep them apprised of the progress and/or blockers
Work in an agile, high speed, collaborative startup environment to solve complex problems

What we're looking for

Strong computer science fundamentals in data structures and algorithms
Experience in using any SCM in day to day development e.g git, mercurial etc
Experience in one or more modern programming languages e.g. go, python, nodejs, java etc
Experience in using web frameworks like Express, Django, Flask etc
Familiarity with object oriented programming and design patterns

Preferred Qualifications

Bachelor's or Master's degree in Computer Science/Engineering
Hands on coding experience in delivering production quality software
Familiarity with CI/CD workflows
Knowledge of deployment processes being used in the team and/or organization
Familiarity or experience in TDD or similar software development methodologies
Experience working in a startup or startup like environment
Hands on experience in deploying an application to production systems
Experience in building automation workflows using modern devops tools and languages
